forensic evidence.

Prof Case

Seem w/ AMDB + Mildal Traumi.

Prof Case :

Stated by his intent findings.

that is to say - cause of death is

its head injury but that in itself

would or should not have caused death.

However, other contributory factors such as

amount of alcohol (over 1200 cc), ~~of recovery~~

position - which decreased long, starvation

of oxygen would have been contributory

factors. ~~that~~ Septicemia is only
a possibility. Further tests are
required (2 weeks). Full report
minimum 5 weeks.

will \rightarrow to come down to discuss.
